AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

1 1. (Currently Amended) A method of remotely accessing a computer system by a
2 remote console, comprising:

3 receiving, by an emulation device that emulates a Universal Serial Bus (USB)
4 human interface device, first pointer position data representing a position of a first pointing
5 device coupled to the remote console, the ~~emulation device to emulate~~ emulated USB human
6 interface device representing a second pointing device that is of a different type than the first
7 pointing device, wherein the first pointer position data is received over a network by the
8 emulation device from the remote console; and

9 generating, by the emulation device that emulates the USB human interface
10 device, second pointer position data representing a position of the second pointing device based
11 on the received first pointer position data.

1 2. (Original) The method of claim 1, further comprising sending the second pointer
2 position data to a software module in the computer system.

1 3. (Currently Amended) The method of claim 2, wherein the emulated USB human
2 interface device represents a USB tablet device, and wherein generating the second pointer
3 position data comprises generating pointer position data associated with [[a]] the USB tablet
4 device.

1 4. (Currently Amended) The method of claim 3, wherein the first pointing device
2 comprises a mouse device, and wherein receiving the first pointer position data comprises
3 receiving the first pointer position data representing a position of [[a]] the mouse device.

1 5. (Currently Amended) The method of claim 3, wherein receiving the first pointer
2 position data comprises receiving the first pointer position data representing a position of a
3 pointing device that provides relative pointer position data to indicate movement of the pointing
4 device.

Appln. Serial No. 10/715,960
Amendment Dated February 21, 2007
Reply to Office Action Mailed November 22, 2006

1 6. (Original) The method of claim 5, wherein receiving the first pointer position
2 data comprises receiving absolute pointer position data.

1 7. (Original) The method of claim 6, wherein generating the second pointer position
2 data comprises generating absolute pointer position data.

1 8. (Cancelled)

1 9. (Currently Amended) The method of claim [[2]] 3, wherein generating the
2 second pointer position data comprises generating pointer position data representing a position in
3 a grid associated with [[a]] the USB tablet device.

1 10. (Cancelled)

1 11. (Currently Amended) The method of claim [[10]] 1, further comprising sending
2 the second pointer position data from the emulated USB human interface device to a USB host
3 controller.

1 12. – 13. (Cancelled)

1 14. (Currently Amended) The method of claim 1, further comprising emulating, with
2 the emulation device, ~~a USB human interface device and~~ a USB host controller that is associated
3 with the emulated USB human interface device.

1 15. (Currently Amended) The method of claim 14, further comprising sending the
2 second pointer position data onto a system bus of the computer system.

Appln. Serial No. 10/715,960
Amendment Dated February 21, 2007
Reply to Office Action Mailed November 22, 2006

1 16. (Original) The method of claim 1, wherein sending the second pointer position
2 data onto the system bus comprises sending the second pointer position data onto a Peripheral
3 Component Interconnect (PCI) bus.

1 17. (Currently Amended) An apparatus comprising:
2 an interface to receive first pointer position data from a remote console over a
3 network, the first pointer position data associated with a first pointing device; and
4 a controller to emulate a Universal Serial Bus (USB) human interface device that
5 represents a second pointing device that is of a different type from the first pointing device, the
6 controller to generate second pointer position data in response to the first pointer position data.

1 18. (Original) The apparatus of claim 17, further comprising an operating system, the
2 operating system to receive the second pointer position data.

1 19. (Original) The apparatus of claim 18, further comprising a server, the operating
2 system executable in the server.

1 20. (Original) The apparatus of claim 19, further comprising a server management
2 device including the interface and the controller, the server management device coupled to the
3 server.

1 21. (Original) The apparatus of claim 20, wherein the server management device is
2 part of the server.

1 22. (Currently Amended) The apparatus of claim 17, wherein the ~~controller is~~
2 ~~adapted to emulate a second pointing device that is~~ emulated USB human interface device
3 represents a tablet device.

1 23. (Original) The apparatus of claim 22, wherein the first pointer position data
2 represents a position of a mouse device coupled to the remote console.

Appln. Serial No. 10/715,960
Amendment Dated February 21, 2007
Reply to Office Action Mailed November 22, 2006

1 24. (Currently Amended) The apparatus of claim [[23]] 22, wherein the first pointer
2 position data represents a position of a pointing device that provides relative pointer position data
3 to indicate movement of the pointing device.

1 25. (Original) The apparatus of claim 24, wherein the first pointer position data
2 comprises absolute pointer position data.

1 26. (Original) The apparatus of claim 25, wherein the second pointer position data
2 comprises absolute pointer position data.

1 27. (Cancelled)

1 28. (Currently Amended) The apparatus of claim [[27]] 17, further comprising a
2 USB host controller to receive the second pointer position data from the USB human interface
3 device.

1 29. (Original) The apparatus of claim 28, wherein the controller comprises a USB
2 device controller.

1 30. (Cancelled)

1 31. (Currently Amended) The apparatus of claim 17, wherein the controller is
2 adapted to further emulate a USB human interface device and a USB host controller associated
3 with the emulated USB human interface device.

Appln. Serial No. 10/715,960
Amendment Dated February 21, 2007

1 32. (Currently Amended) A console comprising:
2 a first pointing device;
3 an interface to communicate absolute pointer position data to a remote computer
4 system over a [[link]] network; and
5 a controller to transform relative pointer position data from the first pointing
6 device ~~to the absolute pointer position data to an intermediate pointer position data, and the~~
7 controller to further transform the intermediate pointer position data to the absolute pointer
8 position data based on characteristics of a Universal Serial Bus (USB) tablet device being
9 emulated by an emulation device coupled to the computer system.

1 33. – 34. (Cancelled)

1 35. (Currently Amended) A system comprising:
2 means for receiving first pointer position data over a network from a remote
3 console, the first pointer position data representing a position of a first pointing mouse device;
4 and
5 means for emulating a ~~second pointing device~~ Universal Serial Bus (USB) tablet
6 device that is [[of a]] different [[type]] from the first pointing mouse device, the emulating means
7 for generating second pointer position data corresponding to the emulated USB tablet device in
8 response to the first pointer position data.

1 36. (Cancelled)
